(54) Title: CEILING MOUNT FOR X-RAY SYSTEM

(57) Abstract: The invention relates to an X-ray installation having two ceiling mounts (20, 30), to which the X-ray tube (26) respectively the X-ray detector (36) are fixed. The ceiling mounts comprise crossbeams (21, 31), which are mounted on the guide rails (11, 12) so as to slide in the longitudinal direction (L_S, L_D) and which in turn carry carriages (22, 32) slidable in the transverse direction (T_S, T_D). Length-adjustable arms (23, 33) are secured to the carriages (22, 23) and at their ends are mounted transverse arms (24, 34) rotatable about a vertical axis of rotation (R_{1S}, R_{1D}). The transverse arms in turn carry equipment carriers (25, 35) rotatable about axes of rotation (R_{2S}, R_{2D}), to which lastly the X-ray tube (26) respectively the X-ray detector (36) are secured.
